## XV.—METEOROLOGICAL STATISTICS.

(Supplied by Commonwealth Meteorologist.)

### No. 42.—Notes on the Rainfall of Western Australia during the months of April, May and June, 1932.

*April.*—Following upon the good general agricultural rains towards the end of March, further valuable rainstorms traversed the State on the 6th, 8th and 13th. As a result growth of pasturage was greatly stimulated, water supplies replenished, and the ground softened for the plough. During the remainder of the month only a few light showers reached inland areas, and, as a consequence, farmers who had sown early found their crops in need of further rain at the end of the month. Pastures, however, were well suited by cool and humid mornings, bright sunny days, and occasional showers.

The first of the two rains mentioned reached the Gascoyne, Murchison and Coolgardie Goldfields, where the monthly averages were, in general, exceeded. The third was mainly confined to the Northern agricultural areas, where, hitherto, many centres had shown weaknesses.

Some rains connected with the storm of the 8th penetrated to parts of the Ashburton and Fortescue, but the season remained very unsatisfactory in these districts and also in the De Grey. The East Kimberley received some thunderstorms, which gave an average rainfall for the month, but in view of the comparatively light results earlier in the season, these falls were only of transient value.

No outstanding temperatures were noted during the month. There were some warm days during the opening fortnight, but for the remainder of the month normal autumn conditions prevailed. Mean maxima showed a general defect over the agricultural districts and Goldfields. In Perth the mean maximum was 74.4 and the mean minimum 57.2. Both compare favourably with the averages, showing defects of 1.9 deg. and 0.1 deg. respectively.

No really rough weather was experienced off our West and South-West Coasts, but vessels coming Westward across the Bight encountered rough conditions on two or three occasions.

*May.*—Weather conditions during the month occasioned every phase of anxiety both to wheat-growers and pastoralists. Very promising disturbances developed again and again, only to pass away after producing rains of strictly localised, or, at best, patchy character. In every instance they were repulsed, and driven out to sea, eventually to pass round the Leeuwin, usually at a great distance off-shore.

During the opening week a particularly promising system developed, and heavy rains fell in parts of the lower South-West, working inland in a fair to moderate fashion to the Avon Valley and parts of the Moora and Great Southern areas, but further afield the results were very disappointing, and from that date the position in the wheat belt, and particularly over the outer areas, became increasingly grave. There was some relief at scattered Great Southern stations on the 12th, and another general rain developed on the 23rd. This greatly brightened the outlook over large areas, but there were still many important districts where the falls could only be described as of a stop-gap nature, at best, and water-carting was still proceeding at some of the outer wheat districts.

In the meantime the efforts of tropical disturbances to break down the resistance of the great high pressure dome centred over the Southern half of the Continent had produced some valuable local rains in the North, the chief of which affected the De Grey and Pilbarra on the 4th, a few West Gascoyne stations on the 8th, and again on various dates from the 19th onward. Two were forced so far Northward by the expanding high pressures that their rains were expended in the Kimberleys. This was quite out of season, but it is worthy of note that almost the same thing happened at the same time last year, and from similar causes. Between the 20th and 22nd quite useful rains fell in that region, giving falls of 135 points at Turkey Creek and 147 at Derby, long after the regular summer rains had ceased. Parts of the North-West and Gascoyne were again visited, making useful additions to the earlier rains.

Another disturbance developed on the 27th, affecting all areas from the tropic Southward. Although the results were patchy in the extreme, and aroused a renewal of the impression of disappointment, the impending breakdown of the high pressure dome became obvious, and, two days later, a heavy general rain swept over the State.

It was still in progress at the end of the month. A minimum of slightly under an inch for the rainstorm was recorded in the outer North-Eastern wheat areas, and somewhat less in the Ravensthorpe and Esperance country, while aggregates as high as 517 points at Pingelly and 652 at Jarrahdale (for the one rainstorm, irrespective of previous falls) were registered. These, it was expected, would raise the levels of the Swan-Avon, Murray-Hotham and Collier rivers rapidly, but no floodings had occurred up to the time of writing.

Valuable falls from this storm extended to the Gascoyne and Murchison, and to parts of the North-West and Coolgardie Goldfields, and the month closed—despite its vagaries, with the averages exceeded in almost every quarter.

*June.*—Following upon the anxious time experienced in May, June also presented some meteorological problems which were by no means encouraging to farmers. Although rains were comparatively frequent over the Coastal, fruit-growing and group settlement areas, their penetrating power was slight. Fairly good results were met with over the Avon Valley, but through the extensive outer wheat areas the falls left much to be desired and it was not until the end of the month that a good soaking rain fell, greatly benefiting pastures and crops.

The longest period of fine weather lasted from the 15th to 26th, broken only by scattered showers on the 22nd, and during this interval very severe frosts were experienced, both in the South-West and wheat areas, and extending through the Goldfields and even to some of the inland tropical stations. These severe conditions checked pasture growth and bore very hardly upon mothering ewes and young lambs.

The rains at the end of the month extended to the West Gascoyne and portions of the East Gascoyne, while between the 18th and 23rd, rains visited the Kimberleys. These were quite unseasonable, although a few instances of June rains in this region are on record. They marked the direct Eastward extension of a Cocos Island depression, which subsequently dropped Southward to give the agricultural rains at the close of the month.

Taking the month as a whole, the rainfall showed excess in the Kimberleys, South-West and South Coastal areas, and inland to Katanning, but in the North-West, Gascoyne, Goldfields and the wheat districts the monthly totals were below average—heavily in the outer agricultural areas. Although the month certainly ranks amongst the dry Junes, there are several instances on record of even lighter rainfall—1902, 1912, 1914 and 1922 being conspicuous.

Day temperatures, on the whole, were somewhat higher than usual, but night temperatures, due to the frosty weather of the third week, were below the average.

Conditions round the Coast were for the most part quiet, but about the middle of the month, and again during the closing days, Westerly gales prevailed across the Bight, causing delay to shipping.
